NUMBER ONE FOR FITNESS INSTRUCTION

OUTSTANDING ADVANTAGES AT A GLANCE

-  **Light weight, size adjustable and comfortable**
-  **12 month guarantee against "sweat death"**
-  **100% serviceable, sweat-resistant construction**
-  **5+ years life expectancy**
-  **Superior natural sound quality**
-  **Used daily in over 10,000 clubs worldwide**
-  **As used at Fitness Conventions everywhere**

VOCAL FITNESS IS IMPORTANT

Save your voice—let Aeromic do the work. Aeromic is the superior headworn microphone, because it is specifically designed for fitness instruction.

The Aeromic looks good with its unique miniature capsule that produces excellent sound quality, making good voice projection easier. And that can take a lot of stress and strain off your vocal chords, especially when teaching high sweat group fitness activities like Body Pump™, studio cycling and high impact aerobics classes.

LONG LIFE SWEAT-RESISTANT CONSTRUCTION

Four years of initial research and development including extensive testing by leading Australian fitness instructors has resulted in a microphone that is the pinnacle of sweat resistant technology.

Thanks to toughened cables and plug connections, Aeromic stands up to all the hard sweaty work you can throw at it - for up to 7 classes a day, 7 days a week, 365 days a year. And with over 10 years of trading behind us it's not unusual to hear from customers that have had their Aeromics for more than 5 years and they're still used daily—something you'd never expect or get from lower cost, lesser microphones.

The Aeromic is compatible with many different brands of transmitters like those from Chiayo, TOA, Shure, Samson, EV-Telex, Audio Technica, AKG, Sennheiser and Sony.

The Aeromic system may cost a little more initially, but it's an investment in quality. When you consider the savings in breakdowns, downtime, repairs and replacements so frequent with inferior models, your savings over time are significant.

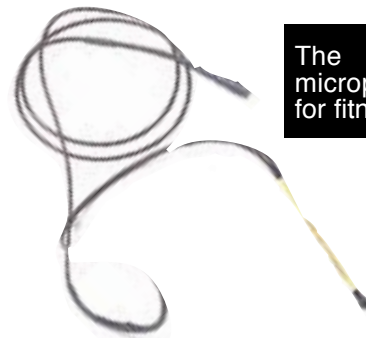

Importantly, the Aeromic system can help save the voices of fitness instructors from stress damage, which is the most valuable saving of all.

A POUCHBELT THAT'S PART OF THE SOLUTION

The Aeromic range of pouchbelts have been specifically designed to give you comfort, performance and a better deal for your Transmitter. Aeromic Pouchbelts come in a variety of materials, styles and colours and the tough neoprene construction gives it long lasting, washable durability with no flaps, no velcro or studs.

More importantly, the transmitter is held vertically, eliminating the 'tug on the plug' problems of horizontal pouches, extending the life of all connections and so the system itself.

The DeLuxe Red Lycra Zipster Pouchbelt is shown here.

The sweat resistant microphone designed for fitness instructors.

Either 'over the top' or 'round the back' fittings for your comfort.
