

Fitnessaudio®

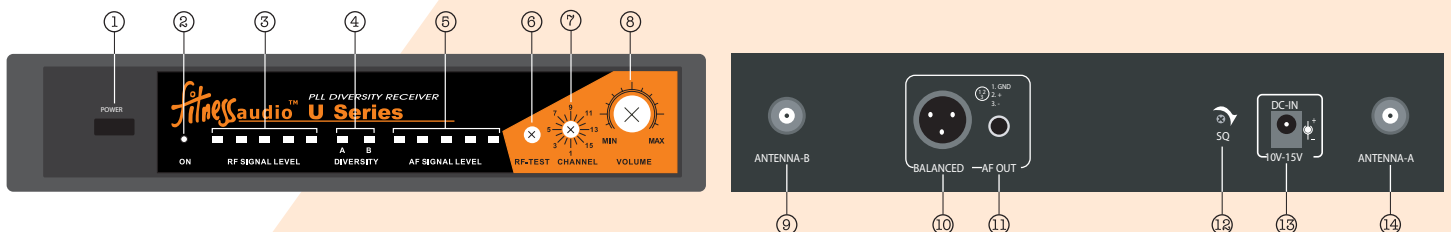

U Series Wireless Systems

The Fitness Audio® 16 Channel UHF Wireless Systems feature a Transmitter made for fitness users. It is a simply made case - no hinges or flaps, no external antennas to get broken off and only one On/Off switch. It is 9V Battery powered and the circuit board inside is protected from sweat damage by a coating of an Australian designed corrosion inhibitor. We deliver it with a dab of our Fitness Audio® eGloop electrical grease in the panel plug and on the battery tags to prevent corrosion. It's a total breakthrough in sweat protection! The Receiver has a "clean channel check" test button making setting up easier and it features a dual antenna diversity circuit for continuous reception with a reduced risk of dropouts. This is the recommended wireless system for the Aeromic & Cyclemic sweat resistant headmic for fitness instruction with a single channel VHF version also available.

The U Series Receiver shown with optional MP50/MP12A rack mount kit.
